

## TOP SPIN - 07 / 2015 INCLUDING INVESTORS REBATES

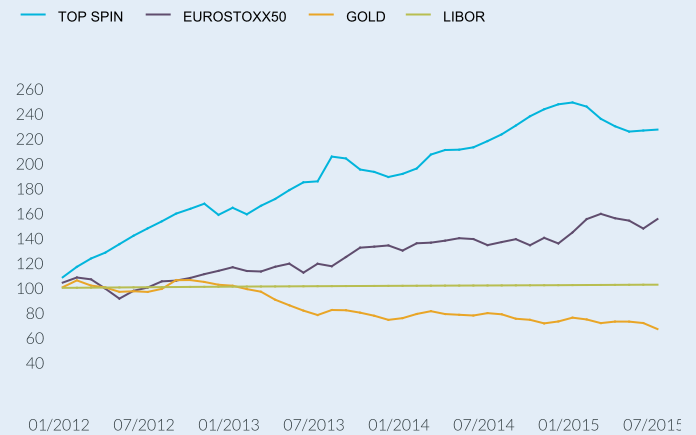

### INVESTMENT STRATEGY

Powered by advanced mathematical/quantitative formulas, JFD's Top Spin is a proprietary German-engineered trading Algorithm specifically designed for optimum return under all market conditions.

Generating high volumes from scalping and hedging market positions, Top Spin operates as a volume based rather than a performance based strategy. Effectively, in addition to its performance, Top Spin generates trading revenues which are in turn shared by JFD to introducers and investors in the form of rebates. Top Spin was developed to manage and diversify risk using different timeframes and asset classes with different trading strategies so it can easily adapt to changes in the current quick and dynamic financial markets. Counter Trend, Trend Following, Price Action and High Frequency Trading are examples of the styles of strategies used under Top Spin.

The two wings of goals are generating high volumes and achieving flat or slightly positive pure performance. Having this as a main target of the system, it aims to satisfy investors' expectations in terms of gains during times of stable markets with no strong movements as well as during volatile sessions. The new diversification model that applies to Top Spin works to reduce the correlation between its results and the performance of other asset classes in the market or outside the market by outperforming other asset classes such as bonds, or other alternative investments.
